

CSA0910-Java Class activity C03

1. Multiple Catch Statements

```
public class MultipleCatch {  
    public static void main(String[] args) {  
        try {  
            int a = 10;  
            int b = 0;  
            int result = a / b;  
            System.out.println(result);  
        } catch (ArithmeticException e) {  
            System.out.println("Arithmetic Exception: Cannot divide by zero");  
        } catch (ArrayIndexOutOfBoundsException e) {  
            System.out.println("Array Index Out Of Bounds Exception");  
        } catch (Exception e) {  
            System.out.println("General Exception");  
        }  
    }  
}
```

The screenshot shows a dark-themed IDE window titled "Output". The text inside the window is as follows:

```
Arithmetic Exception: Cannot divide by zero  
=== Code Execution Successful ===
```

A "Clear" button is located in the top right corner of the Output window. The bottom of the image shows a portion of the Windows taskbar with icons for various applications.

2.StringIndexOutOfBoundsException

```
public class StringIndexExample {  
    public static void main(String[] args) {  
        String name = "Java";  
        try {  
            System.out.println("Character: " + name.charAt(10));  
        } catch (StringIndexOutOfBoundsException e) {  
            System.out.println("String Index Out Of Bounds Exception");  
            System.out.println("Invalid string index");  
        }  
    }  
}
```

Output Clear

```
String Index Out Of Bounds Exception  
Invalid string index  
  
=== Code Execution Successful ===
```

3.Finally

```
public class FinallyExample {  
    public static void main(String[] args) {  
        try {  
            int a = 10;  
            int b = 2;  
            int result = a / b;  
            System.out.println("Result = " + result);  
        } catch (ArithmeticException e) {  
            System.out.println("Arithmetic Exception");  
        } finally {  
            System.out.println("Finally block is always executed");  
        }  
    }  
}
```

Output Clear

```
Result = 5  
Finally block is always executed  
  
=== Code Execution Successful ===
```

4.Throw – Check Voting Eligibility

```
public class VotingEligibility {
    static void checkAge(int age) {
        if (age < 18) {
            throw new ArithmeticException(
                "Person is not eligible to vote"
            );
        } else {
            System.out.println("Person is eligible to vote");
        }
    }
}

public static void main(String[] args) {
    try {
        checkAge(17);
    } catch (ArithmeticException e) {
        System.out.println(e.getMessage());
    }
}
```

Output Clear

Person is not eligible to vote

=== Code Execution Successful ===

5.Throws

```
import java.io.IOException;

public class ThrowsExample {
    static void display() throws IOException {
        throw new IOException("This is an IOException");
    }

    public static void main(String[] args) {
        try {
            display();
        } catch (IOException e) {
            System.out.println("Exception caught: " + e.getMessage());
        }
    }
}
```

Output Clear

Exception caught: This is an IOException

=== Code Execution Successful ===
